

BUNDLE

for the prevention of surgical site infections

Pre-operative phase

1

Avoid hair removal (shaving).
If absolutely necessary,
use a clipper.

2

Administer antibiotics before incision
for high-risk surgical procedures
or when prosthetic material is implanted,
and ensure optimal administration timing.

Intra-operative phase

3

Use alcohol-based antiseptics
containing chlorhexidine gluconate
for surgical site preparation.

2x

4

Re-administer antibiotics
for prolonged procedures
and in patients with significant blood loss.

Post-operative phase

5

**Discontinue
antibiotic prophylaxis**
after surgery.

REMEMBER!
Always practice hand hygiene and use gloves appropriately.
