Clustering

The screenshot shows the BioNumerics software interface for clustering analysis. The main window displays a dendrogram for the dataset "PFGE-Apal". The top menu bar includes "File", "Edit", "Layout", "Groups", "Clustering", "Statistics", "Fingerprints", "Characters", "Sequence", "ReadData", "GenomeMaps", "ReadSets", "Spectra", "Composite", "Window", and "Help". The toolbar contains various icons for file operations and analysis. A red circle highlights the "Comparison" icon in the toolbar, and a red arrow points from it to the open "Comparison settings" dialog box.

Dendrogram: Shows the hierarchical clustering of samples based on PFGE-Apal data. The x-axis represents similarity coefficients (85, 90, 95, 100).

Comparison settings (Page 1):

- Keep existing similarity matrix
- Curve based
 - Pearson correlation
 - Cosine coefficient
 - Ranked Pearson correlation
- Including errors
 - Weighted Pearson correlation
- Band based
 - Jaccard
 - Dice
 - Jeffrey's X
 - Ochiai
 - Number of different bands

Optimization: 1 %

Band filtering:
Minimum height: 0 %
Minimum surface: 0 %

Band matching:
Tolerance: 1 %
Tolerance change: 0 %

Uncertain bands:

Relaxed doublet matching
 Area sensitive Fuzzy logic

Database management

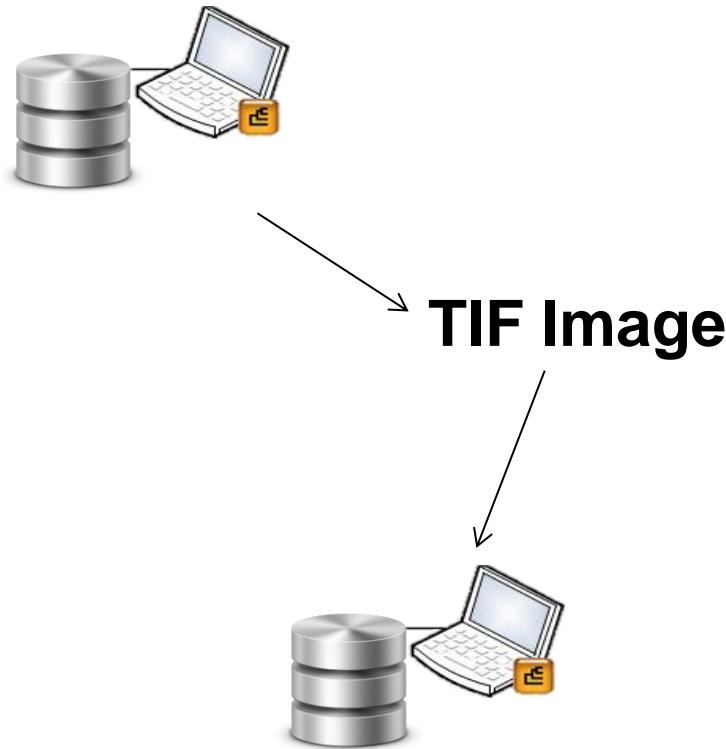

Communication between databases

EURL Lm
European Union Reference Laboratory for
Listeria monocytogenes

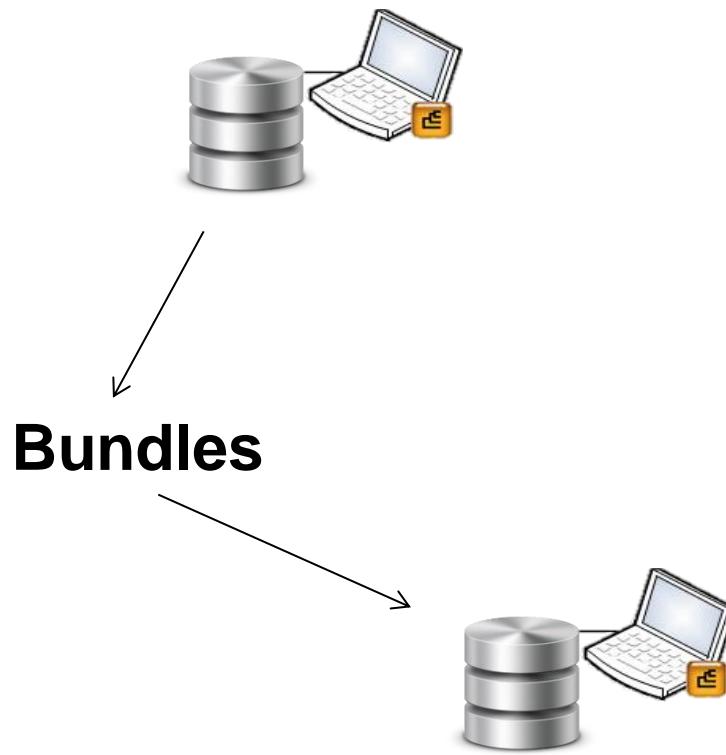

Database exchange

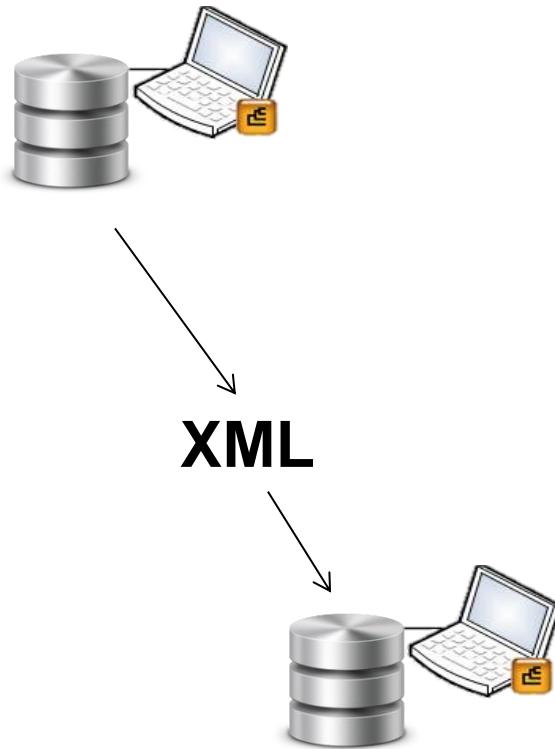

- Permant import of fingerprint, need image processing, normalization and analysis

Database exchange

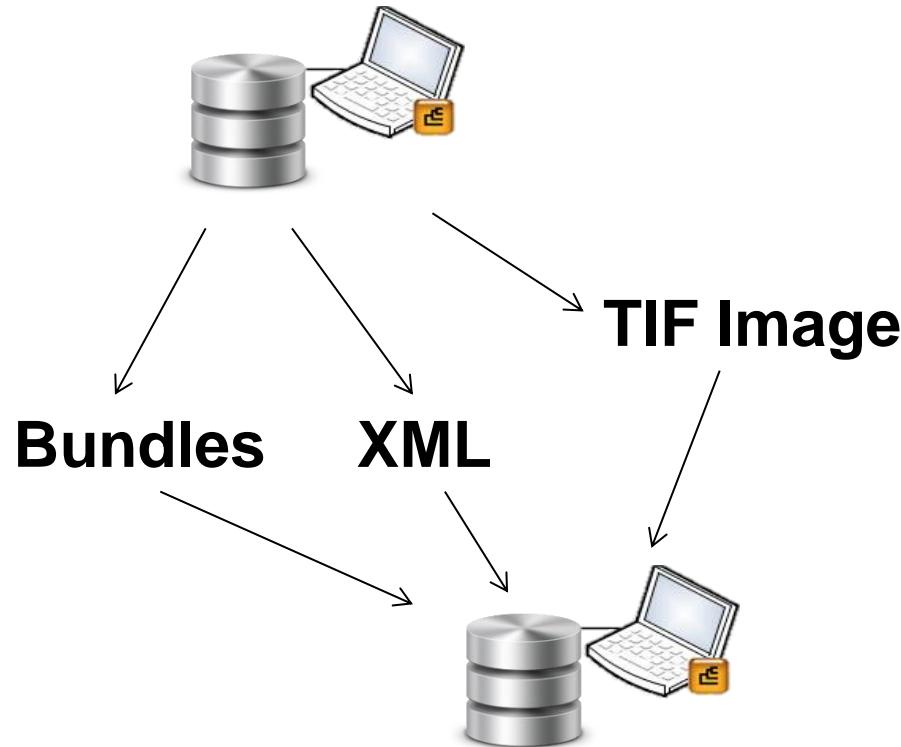

- Profile are temporally available in the database (profiles, sequences and fields) until the software shut down

Database exchange

- Permanent import of data (profiles, sequences and fields) without any analysis.

Database exchange

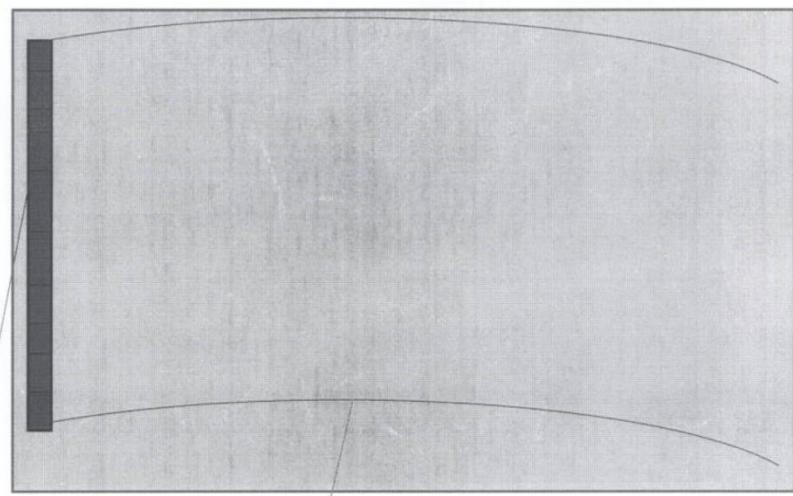

Database compatibility

EURL Lm
European Union Reference Laboratory for
Listeria monocytogenes

Reference system

Reference system included in the gel:

- *Salmonella Braenderup H9812 XbaI restriction profile*

Reference system

Database main reference system included in the BioNumerics experiment:

- *Salmonella Braenderup H9812 XbaI* restriction profile

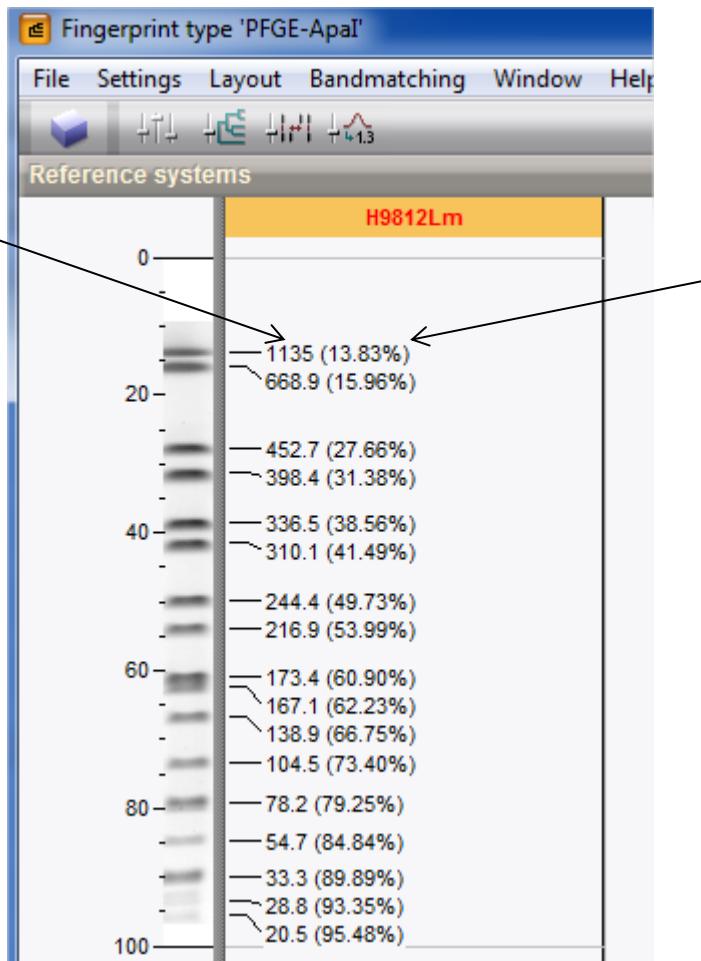

The screenshot shows the BioNumerics software interface with several windows open:

- Database entries:** A large table showing entries for Listeria isolates. Columns include Key, MLST CC, MLST ST, IDGr90_AscI, IDGr90_Apal, and three green status indicators. The list contains over 200 entries.
- Experiment types:** A table listing experiment types: PFGE-Apal (Fingerprint types), PFGE-Ascl (Fingerprint types), and Apal-Ascl (Composite data sets). PFGE-Apal is selected.
- Identification projects:** A table listing identification projects: Bilan Apal identification (modified 2016-05-23 17:27:23) and Bilan Ascl identification (modified 2016-06-28 15:40:23).
- Comparisons:** A table listing comparisons: Bilan Apal (modified 2016-06-28 15:34:22, level 2333), Bilan Ascl (modified 2016-06-30 13:22:37, level 2402), CC5 - CC9 (modified 2016-06-23 13:54:54, level 9), Unatisfactory Apal (modified 2016-06-27 17:58:05, level 12), CC - Grop 80% (modified 2016-06-30 13:37:47, level 2407), Animal vs Food only pork (modified 2016-06-30 15:38:15, level 906), pork feces (modified 2016-06-30 15:54:13, level 148), Pork food (modified 2016-06-30 15:59:39, level 758), and Raw product (modified 2016-07-04 10:30:13, level 351).

At the bottom, a status bar displays: Database: Listeria_LSAI_HQPAAP_IFIP (_DefaultUser_) | Entries: Loaded=2408, View=2408, Selected=0 | 3 experiments | C:\Users\b.felix\Documents\Publi diversite porc\Listeria_LSAI_HQPAAP_IFIP |

Reference system

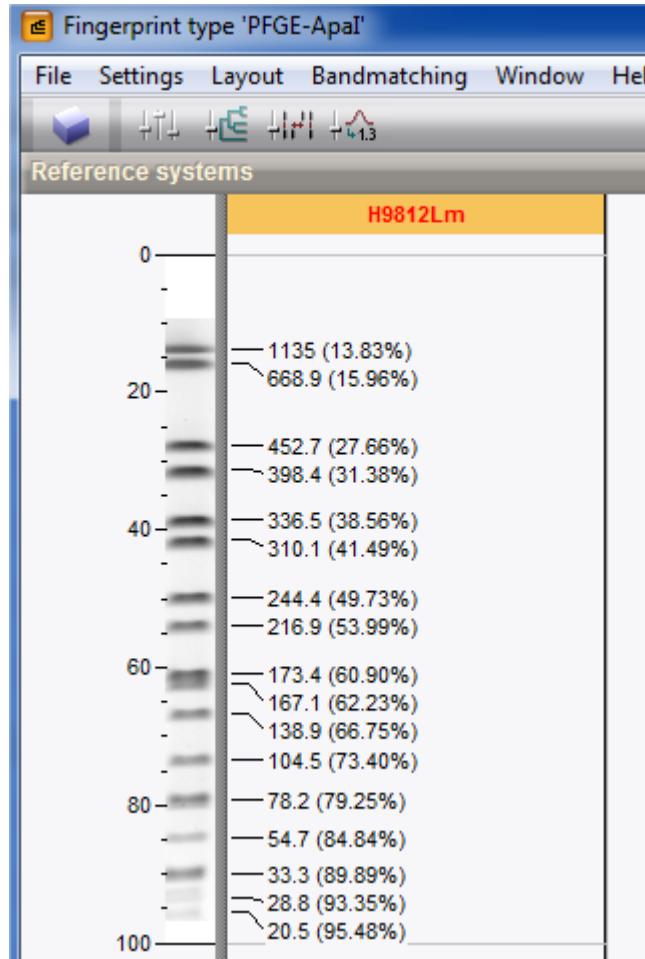

Database main reference parameters

How to proceed when the reference systems are different ?

Re-mapping

Several reference systems can work together

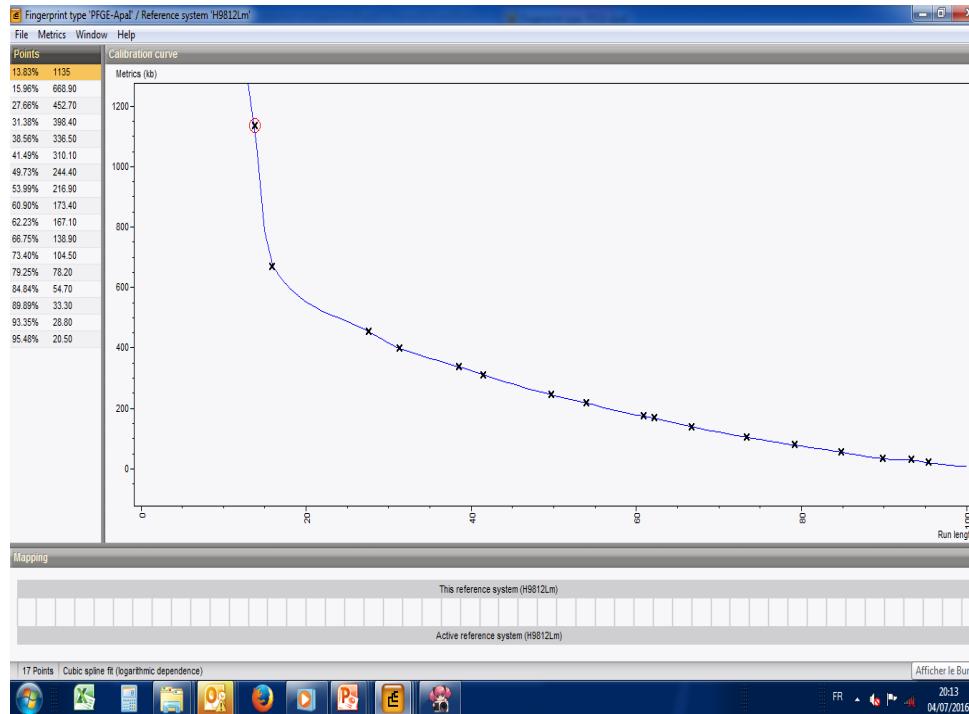

Re-mapping

The re-mapping can be used for bundles and XML import

Bundles need re-mapping to be set beforehand

XML import implement automatically parallel reference system

Re-mapping

The calibration curve is used to perform the re-mapping process

Re-mapping

The screenshot displays a software application for fingerprint analysis, specifically for PFGE-ApaI. The main window shows a chromatogram with several peaks labeled: 0, 113, 668, and 452. A context menu is open over the 113 peak, with the option "Edit reference system" highlighted.

A secondary window titled "Fingerprint type 'PFGE-ApaI' / Reference system..." contains a "Calibration curve" plot and a table of "Points". The points listed are:

Point	Metrics
13.83%	1135
15.96%	668.90
27.66%	452.70
31.38%	398.40
38.56%	336.50
41.49%	310.10
49.73%	244.40
53.99%	216.90
60.90%	173.40
62.23%	167.10
66.75%	138.90
73.40%	104.50

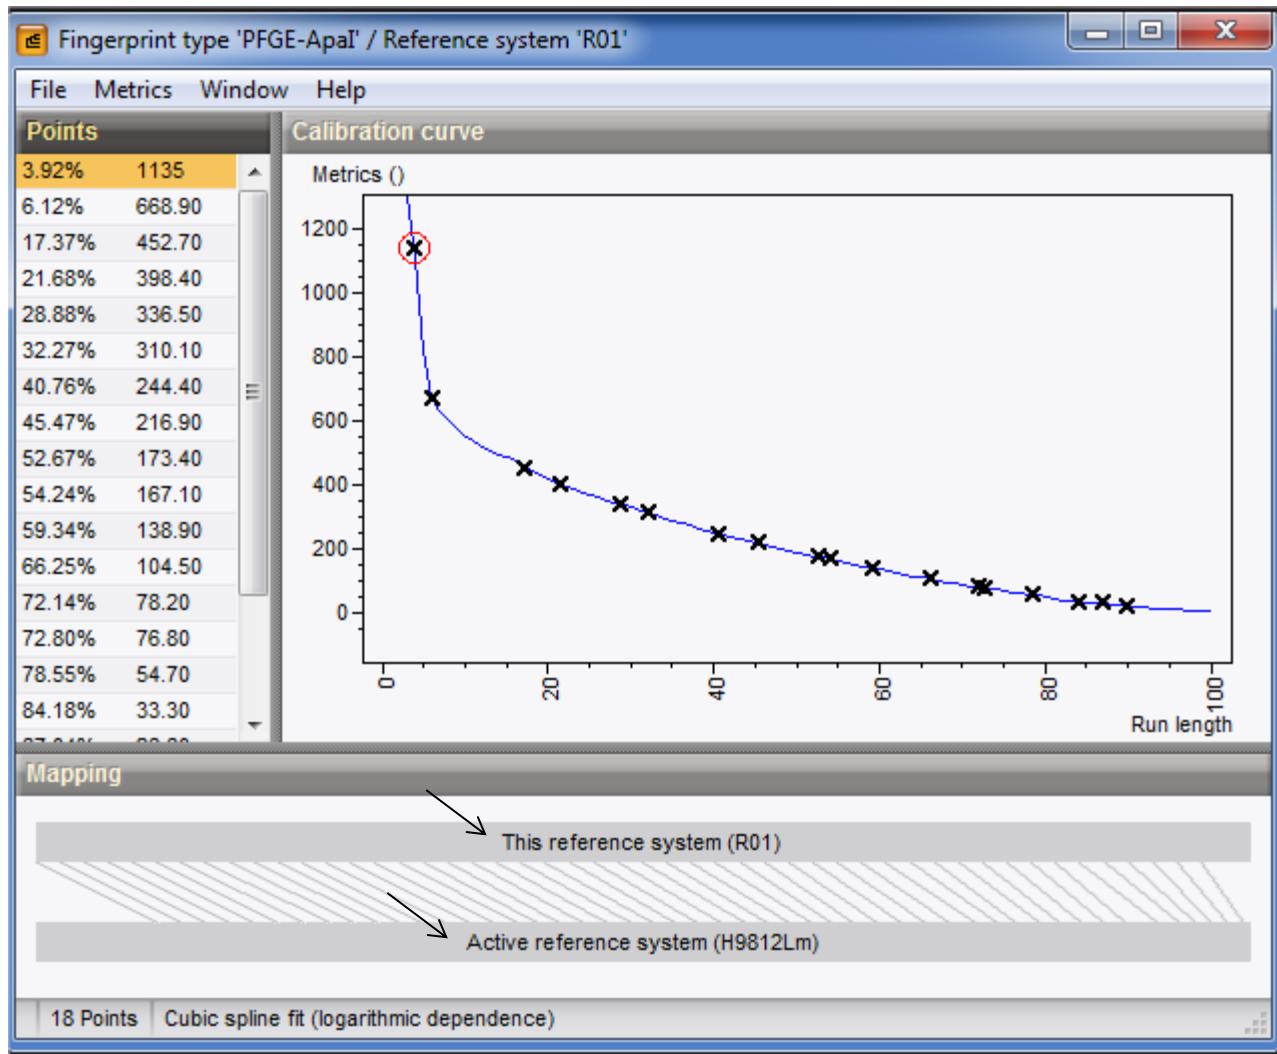

A third window titled "Fingerprint type 'PFGE-ApaI' / Reference system..." shows a list of "Mapping" options, with "Logarithmic dependence" checked.

Software Interface Elements:

- Main Window:** Shows a chromatogram with peaks at 0, 113, 668, and 452. The "Settings" tab is selected in the bottom navigation bar.
- Context Menu (Open over Peak 113):**
 - File
 - Settings (selected)
 - Layout
 - Reference systems
 - General settings...
 - Comparison settings...
 - Position tolerance settings...
 - Comparative quantification...
 - Set standard...
 - Fingerprint file information fields...
 - Set as active reference system
 - Edit reference system (highlighted)
 - New reference system (positions)...
 - New reference system (curve)...
 - Remove reference system
 - Create peak intensity profile...
 - Enable fast band matching
 - Level assignment...
 - Summary replication settings...
- Secondary Window (Top Right):** Title: "Fingerprint type 'PFGE-ApaI' / Reference system...". Contains a "Calibration curve" plot and a table of "Points".
- Tertiary Window (Bottom Right):** Title: "Fingerprint type 'PFGE-ApaI' / Reference system...". Contains a list of "Mapping" options with "Logarithmic dependence" checked.
- Bottom Navigation Bar:** Settings, Comparison settings, Crosslinks, Attachments.

Re-mapping is implemented

Re-normalization

- Specific script provided by Applied Maths
- Convert_refsys.BNS
- The script can re-analysed automatically all fingerprint into another internal reference system
- However this script only to convert similar reference system e.g. SB01 into SB02
- The script works by batch of 20 gels
- Beware to backup your system before to proceed
- Beware to verify the output of the re-normalisation
